1 Overview of the Data

This dataset merges utility-level performance metrics with country-level market structure and governance characteristics, as well as national electricity access rates. The data was cleaned, merged, and reshaped to support a benchmarking analysis of 49 electric utilities across 37 countries. The final tidy dataset includes 21 variables.

2 Sources and Data Wrangling

Data Sources:

- UPBEAT Utility Database: Utility performance and financial indicators.
- World Bank Market Structure Dataset: Country-level electricity market structures and governance characteristics.
- World Bank - Access to Electricity (WDI): National electricity access rates.

Wrangling Steps:

- Computed the average value of input and output indicators across all available years for each utility.
- Performed DEA using an input-oriented CCR model in R.
- Merged DEA scores with 2012 market structure data.
- Joined 2022 national electricity access data.
- Standardized names and cleaned structure.

3 Data Envelopment Analysis (DEA) Methodology

The **Efficiency Score** variable in this dataset was constructed using **Data Envelopment Analysis (DEA)**, a non-parametric technique for benchmarking the relative efficiency of utilities in transforming inputs into outputs. This project applies an **input-oriented CCR model** (assuming constant returns to scale), which estimates how much a utility could reduce its inputs while maintaining its output levels.

The input and output variables were sourced from the **UPBEAT utility performance database**, a World Bank initiative that standardizes multi-year utility data across financial, operational, and technical indicators. For each utility, input and output values were averaged across all available years in the dataset to create a representative profile.

Inputs: - Employees - Total Assets

Outputs: - Net Profit Margin - Customers - Transformed Distribution Losses (1 - Distribution Losses)

The model was implemented in R using the **Benchmarking** package. Utilities with missing input/output values were excluded.

4 Variable Descriptions and Summaries

4.1 Utility Long Name

- **Type:** Character
- **Description:** Full legal name of the electric utility.
- **Source:** UPBEAT

4.2 Utility Short Name

- **Type:** Character
- **Description:** Abbreviated or acronym version of the utility name.
- **Source:** UPBEAT

4.3 Ownership

- **Type:** Factor
- **Description:** Ownership structure of the utility (Public or Private).
- **Source:** UPBEAT

Ownership	Count
Private	11
Public	38

4.4 Type

- **Description:** Categorical variable describing the operational structure of the utility. All utilities in the dataset include a **distribution component** in their operations, but may also engage in other segments of the power sector:
 - **D (Distribution-only):** Utility is solely responsible for electricity distribution.
 - **G&D (Generation and Distribution):** Utility is involved in both electricity generation and distribution, but not transmission.
 - **VIU (Vertically Integrated Utility):** Utility is active across the entire electricity value chain, including generation, transmission, and distribution.
- **Source:** UPBEAT

Type	Count
D	25
G&D	3
T&D	1
VIU	20

4.5 Country

- **Type:** Character
- **Description:** Country of operation.
- **Source:** World Bank Market Structure Dataset

Table 3: List of Countries in the Dataset

Countries
Angola, Argentina, Armenia, Bangladesh, Benin, Bolivia, Bosnia and Herzegovina, Brazil, Burkina Faso, Cameroon, Central African Republic, Colombia, Democratic Republic of the Congo, Dominica, Ecuador, Federated States of Micronesia, Ghana, Indonesia, Ivory Coast, Kazakhstan, Kyrgyzstan, Malaysia, Marshall Islands, Mozambique, Namibia, Niger, Pakistan, Paraguay, Peru, Saint Lucia, Senegal, South Africa, Sudan, Thailand, Uganda, Zambia, Zimbabwe

The dataset includes 37 unique countries.

4.6 Region

- **Type:** Factor
- **Description:** Geographical region classification assigned to each country.
- **Source:** UPBEAT (World Bank classification)

Region	Count
AFR	19
EAP	6
ECA	5
LAC	13
SAR	6

4.7 Income Group

- **Type:** Factor
- **Description:** Country income classification (Low, Lower-middle, etc.).
- **Source:** UPBEAT (World Bank classification)

Income Group	Count
Low income	7
Lower middle income	19
Upper middle income	23

4.8 Employees

- **Type:** Numeric
- **Description:** Total number of employees in utility company.
- **Source:** UPBEAT

Table 6: Summary: Employees

Min	Q1	Median	Mean	Q3	Max	NAs
143.75	607.3636	3076	6679.158	6311.125	51150.36	0

4.9 Total Assets

- **Type:** Numeric
- **Description:** Total assets in USD millions.
- **Source:** UPBEAT

Table 7: Summary: Total Assets

Min	Q1	Median	Mean	Q3	Max	NAs
27.99988	388.9492	1259.999	5182.658	2096.416	89969.89	0

4.10 Net Profit Margin

- **Type:** Numeric
- **Description:** Net profit as a percentage of revenue.
- **Source:** UPBEAT

Table 8: Summary: Net Profit Margin

Min	Q1	Median	Mean	Q3	Max	NAs
-0.766375	-0.0328633	0.01552	-0.0259443	0.0484	0.193	0

4.11 Customers

- **Type:** Numeric
- **Description:** Number of customers served by utility company.
- **Source:** UPBEAT

Table 9: Summary: Customers

Min	Q1	Median	Mean	Q3	Max	NAs
1379.937	413678.7	987979.8	3280708	2203402	68146061	0

4.12 Distribution Losses

- **Type:** Numeric
- **Description:** Share of electricity lost in distribution.
- **Source:** UPBEAT

Table 10: Summary: Distribution Losses

Min	Q1	Median	Mean	Q3	Max	NAs
0.03485	0.0834	0.131	0.1493647	0.1929817	0.3576	0

4.13 Transformed Distribution Losses

- **Type:** Numeric
- **Description:** 1 minus distribution losses.
- **Source:** UPBEAT (calculated)
- **Note:** This is a transformation of “Distribution Losses” variable to fit DEA model appropriately as an output.

Table 11: Summary: Transformed Distribution Losses

Min	Q1	Median	Mean	Q3	Max	NAs
0.6424	0.8070183	0.869	0.8506353	0.9166	0.96515	0

4.14 Operating and Debt Service Cost Recovery

- **Type:** Numeric
- **Description:** Ratio of billed revenue to cost of service, calculated on a billed basis (excluding subsidies and collections). This reflects whether the utility is generating enough billed revenue to cover its operating costs and debt service obligations.
- **Source:** UPBEAT

Table 12: Summary: Cost Recovery

Min	Q1	Median	Mean	Q3	Max	NAs
0.331851	0.8831145	0.9851942	0.932262	1.04524	1.175037	30

4.15 Efficiency Score

- **Type:** Numeric
- **Description:** A Data Envelopment Analysis (DEA) efficiency score ranging from 0 to 1, where 1 indicates a fully efficient utility. Scores were computed using an input-oriented CCR model based on selected input (Employees, Total Assets) and output (Net Profit Margin, Customers, Transformed Distribution Losses) variables.
- **Source:** UPBEAT (DEA computed)

Table 13: Summary: Efficiency Score

Min	Q1	Median	Mean	Q3	Max	NAs
0.0373708	0.2966317	0.5430189	0.5583466	0.8297779	1	0

4.16 Market Structure

- **Type:** Factor
- **Description:** Categorical variable representing the utility's national power market structure, based on a simplified classification derived from World Bank market reform data. The three categories are:
 - **VIU (Vertically Integrated Utility):** The utility operates within a fully integrated system controlling generation, transmission, and distribution.
 - **SBM (Single Buyer Model):** A central purchasing entity procures electricity from generators and sells it to distributors or end-users.
 - **WRC (Wholesale-Retail Competition):** Market features competition at both the wholesale and retail levels, allowing multiple sellers and/or buyers.
- **Note:** This classification reflects the extent of market liberalization and unbundling reforms in the utility's country of operation as of 2012.
- **Source:** World Bank Market Structure Dataset

Market Structure	Count
Single Buyer Model (SBM)	22
Vertically Integrated Utility (VIU)	15
Wholesale-Retail Competition	12

4.17 Regulator

- **Type:** Logical
- **Description:** TRUE if an independent regulator exists.
- **Source:** World Bank Market Structure Dataset

Regulator	Count
FALSE	19
TRUE	30

4.18 Private IPP Established

- **Type:** Logical
- **Description:** TRUE if Independent Power Producer (IPP) exist.
- **Source:** World Bank Market Structure Dataset

IPP Established	Count
FALSE	20
TRUE	29

4.19 Unbundling

- **Type:** Logical
- **Description:** TRUE if transmission is unbundled.
- **Source:** World Bank Market Structure Dataset

Unbundling	Count
FALSE	23
TRUE	26

4.20 Out of VIU

- **Type:** Logical
- **Description:** TRUE if the utility is no longer vertically integrated.
- **Source:** World Bank Market Structure Dataset

Out of VIU	Count
FALSE	15
TRUE	34

4.21 Access 2022

- **Type:** Numeric
- **Description:** Percent of national population with electricity access in 2022.
- **Source:** World Bank World Development Indicators (WDI)

Table 19: Summary: Access to Electricity (2022)

Min	Q1	Median	Mean	Q3	Max	NAs
15.7	63.2	96.2	80.45102	100	100	0

5 Notes

- DEA efficiency scores were calculated using the CCR input-oriented model.
- Monetary figures are in millions of USD.
- Logical fields show TRUE/FALSE flags for market conditions.
- This dataset was developed as part of my Substantial Research Paper (SRP) to fulfill the requirements for the Master of Arts in International Economic Relations: Quantitative Methods at American University. The data preparation, analysis, and documentation were completed in Spring 2025.
